

MUHAMMAD ARSALAN KHAN

Freelance Full-Stack Web Developer | Web Applications | Automation

Islamabad, Pakistan · Available for Freelance Projects on Fiverr ·

PROFESSIONAL SUMMARY

I design and build modern, responsive websites and web applications, handling both frontend and backend development within a single project. My focus is on clean interfaces, reliable functionality, and code that stays maintainable as a project grows. I work comfortably with databases, APIs, and deployment, so a project can go from requirement to a live, working product. I take on freelance web development, WordPress, and automation projects, and I am currently available for new client work.

CORE SERVICES

- **Custom Website Development** — Tailored websites built around your business goals, not generic templates.
- **Frontend Development** — Interactive, user-friendly interfaces built with modern JavaScript and React.
- **Full-Stack Web Development** — End-to-end ownership of your project, from interface to database to deployment.
- **Business Website Development** — Professional websites that represent your brand and support conversions.
- **Web Application Development** — Custom web applications built around a specific business problem.
- **Website Performance Optimization** — Faster load times and a smoother experience for your visitors.
- **Website Deployment** — Getting your project live and properly configured on hosting.
- **Database Integration** — Structured data storage that fits your application's real needs.
- **Web Automation** — Automating repetitive tasks to save time and reduce manual work.
- **Responsive Website Design** — Interfaces that look and work correctly across desktop, tablet, and mobile.
- **Backend Development** — Reliable server-side logic, APIs, and business rules behind your application.
- **WordPress Website Development** — Business-ready WordPress sites with custom pages and functionality.
- **Landing Page Development** — Focused, conversion-oriented pages for campaigns, products, or services.
- **Website Bug Fixing** — Diagnosing and resolving functional issues affecting your live site.
- **Basic Technical SEO Implementation** — On-page SEO structure that helps search engines read your site correctly.
- **Form Integration and Form Handling** — Contact forms and data-collection flows that work reliably end to end.
- **API Integration** — Connecting your website or app to third-party services and data sources.
- **Website Maintenance and Updates** — Ongoing fixes, updates, and small improvements after launch.

TECHNICAL SKILLS

Frontend: HTML5, CSS3, JavaScript, React, TypeScript, Vite

Backend: Node.js, Express.js, Python, Django, FastAPI, PHP

Programming Languages: Java, Python, JavaScript, TypeScript, C++

Databases: MySQL, MongoDB, SQLite

CMS: WordPress

Other: REST APIs, Git, GitHub, Responsive Design, SEO Fundamentals, Website Deployment, Database Integration, API Integration, Web Automation

FEATURED PROJECTS

Quick Turn Auto Keys

A professional automotive locksmith business website featuring service pages, vehicle-brand pages, and blog content.

Technologies: HTML, CSS, JavaScript

Problem Solved: Needed a credible, search-friendly business website to present services and reach local customers online.

Contribution: Built responsive page layouts, SEO structure with structured data and a sitemap, and handled deployment.

Khan Car Rental

A car rental web project focused on clear service presentation and a responsive booking-oriented interface.

Technologies: HTML, CSS, JavaScript

Problem Solved: Needed an accessible way to present rental vehicles and services with a clean, responsive layout.

Contribution: Built the responsive UI and implemented the core web functionality for the site.

SmartVision Webcam Attendance System

A webcam-based attendance project demonstrating applied software development and automation concepts.

Technologies: Python

Problem Solved: Manual attendance tracking is slow and error-prone; the project automates recognition and logging.

Contribution: Developed the core application logic and the automation workflow behind the attendance capture.

FarmSupply Pro Inventory Management System

A desktop inventory management application built with an MVC architecture and relational database backend.

Technologies: Java, Java Swing, MySQL, JDBC, MVC

Problem Solved: Businesses need a structured way to track stock levels, records, and inventory movement.

Contribution: Implemented the MVC architecture, the Swing interface, and the MySQL/JDBC data layer.

WebAnalyzer

A Python-based application for analyzing web content and surfacing useful information from it.

Technologies: Python

Problem Solved: Reviewing web content manually is time-consuming; the tool automates part of that analysis.

Contribution: Built the Python application logic and the analysis functionality it relies on.

EDUCATION

BS Software Engineering

Shifa Tameer-e-Millat University, Islamabad

PROFESSIONAL STRENGTHS

- Client-focused development approach
- Clean and maintainable code
- Full project implementation, start to finish
- API integration
- Website maintenance and support
- Ability to understand and translate client requirements
- Responsive web development across devices
- Practical problem solving
- Database integration
- Website deployment
- Attention to UI/UX detail
